LynxGuide Stratus-SaaS Hosted Servers

The LynxGuide Stratus-SaaS hosted server is for larger customer deployments that is customer managed. A Lynx technical support specialist will gather your requirements and coordinating with your IT department to deploy your Lynx system. A connection is defined as a network connection to the LynxGuide Stratus server. A connection is used by a LynxNet hardware device, or LynxClient installed on a computer or the Lynx Alerts app.

SKU #780-HLYNX-ADD1K

The HLYNX-CF-ADD1K is an additional 1,000 connections to your LynxGuide Stratus server. The Lynx support team will add them to your server.

Communication Protocol: The LynxNet hardware and LynxClient software achieves bidirectional communication through a client-initiated, persistent socket session to the LynxGuide Stratus server on ports 443 and 10117-10121. **No network ingress connections are required.** All server communications are TLS encrypted. In addition to providing security, this method is ideal if the hardware is behind a gateway, as no NAT rules are required to achieve connectivity.
